

Fundamentals of General, Organic, and Biological Chemistry, 8e (McMurry)
Chapter 2 Atoms and the Periodic Table

1) The smallest amount of an element that retains that element's characteristics is the

- A) atom.
- B) electron.
- C) molecule.
- D) neutron.
- E) proton.

Answer: A

Diff: 1

Section: 2.1

LO: 2.1

Global LO: G2

2) Another name for atomic mass unit (amu) is the

- A) avogadro.
- B) dalton.
- C) Kekule
- D) kelvin.
- E) mendeleeev.

Answer: B

Diff: 1

Section: 2.1

LO: 2.1

Global LO: G2

3) Which characteristics correctly describe a proton?

- A) approximate mass 1 amu; charge +1; inside nucleus
- B) approximate mass 5×10^{-4} amu; charge -1; outside nucleus
- C) approximate mass 5×10^{-4} amu; charge +1; inside nucleus
- D) approximate mass 1 amu; charge 0; inside nucleus
- E) approximate mass 1 amu; charge +1; outside nucleus

Answer: A

Diff: 1

Section: 2.1

LO: 2.2

Global LO: G2

4) Which particle has a mass approximately equal to the mass of a proton?

- A) atom
- B) electron
- C) neutron
- D) nucleus
- E) quark

Answer: C

Diff: 1

Section: 2.1

LO: 2.2

Global LO: G2

5) Protons possess a _____ charge, and neutrons possess a _____ charge.

- A) negative; negative
- B) negative; positive
- C) positive; negative
- D) positive; zero
- E) zero; positive

Answer: D

Diff: 1

Section: 2.1

LO: 2.2

Global LO: G2

6) Protons possess a _____ charge, and electrons possess a _____ charge.

- A) negative; negative
- B) negative; positive
- C) positive; negative
- D) positive; zero
- E) zero; positive

Answer: C

Diff: 1

Section: 2.1

LO: 2.2

Global LO: G2

7) Which characteristics correctly describe a neutron?

- A) approximate mass 1 amu; charge +1; inside nucleus
- B) approximate mass 1 amu; charge -1; inside nucleus
- C) approximate mass 1 amu; charge 0; inside nucleus
- D) approximate mass 5×10^{-4} amu; charge 0; inside nucleus
- E) approximate mass 5×10^{-4} amu; charge -1; outside nucleus

Answer: C

Diff: 1

Section: 2.1

LO: 2.2

Global LO: G2, G4

8) Which characteristics correctly describe an electron?

- A) approximate mass 1 amu; charge +1; inside nucleus
- B) approximate mass 1 amu; charge -1; inside nucleus
- C) approximate mass 1 amu; charge 0; inside nucleus
- D) approximate mass 5×10^{-4} amu; charge 0; inside nucleus
- E) approximate mass 5×10^{-4} amu; charge -1; outside nucleus

Answer: E

Diff: 1

Section: 2.1

LO: 2.2

Global LO: G2, G4

9) In a neutral atom the number of _____ is equal to the number of _____.

- A) protons; electrons
- B) protons; neutrons
- C) neutrons; electrons
- D) protons + electrons; neutrons
- E) none of the above

Answer: A

Diff: 1

Section: 2.1

LO: 2.2

Global LO: G2

10) Which statement is **incorrect** according to modern atomic theory?

- A) Some sugars have the formula $C_{3.5}H_7O_{3.5}$.
- B) An atom of ^{14}N has the same approximate mass as an atom of ^{14}C .
- C) An atom of ^{14}N behaves differently in chemical reactions than an atom of ^{14}C .
- D) An example of a chemical reaction is $\text{CaCO}_3 \rightarrow \text{CaO} + \text{CO}_2$.
- E) C_2H_6 and C_3H_8 are both possible compounds of carbon and hydrogen.

Answer: A

Diff: 2

Section: 2.1

LO: 2.1

Global LO: G2

11) Where is most of the mass of an atom concentrated?

- A) electrons
- B) neutrons
- C) nucleus
- D) orbitals
- E) protons

Answer: C

Diff: 2

Section: 2.1

LO: 2.1

Global LO: G2

12) An atom with $Z = 26$ and $A = 58$ contains _____ protons and _____ neutrons.

A) 26; 58

B) 58; 26

C) 26; 32

D) 32; 26

E) 26; 84

Answer: C

Diff: 1

Section: 2.2, 2.3

LO: 2.2, 2.3

Global LO: G4

13) An atom with $Z = 35$ and $A = 80$ contains _____ protons, _____ electrons, and _____ neutrons.

A) 35; 35; 80

B) 80; 35; 35

C) 35; 35; 45

D) 45; 80; 45

E) 45; 80; 35

Answer: C

Diff: 1

Section: 2.2, 2.3

LO: 2.2, 2.3

Global LO: G4

14) The atomic number of an atom containing 29 protons, 29 electrons, and 34 neutrons is

A) 5.

B) 29.

C) 34.

D) 58.

E) 63.

Answer: B

Diff: 1

Section: 2.2, 2.3

LO: 2.2, 2.3

Global LO: G4

15) An atom containing 47 protons, 47 electrons, and 60 neutrons has a mass number of

- A) 13.
- B) 47.
- C) 60.
- D) 107.
- E) 154.

Answer: D

Diff: 1

Section: 2.2, 2.3

LO: 2.2, 2.3

Global LO: G4

16) The value of Z for an atom containing 47 protons, 47 electrons, and 60 neutrons is

- A) 13.
- B) 47.
- C) 60.
- D) 107.
- E) 154.

Answer: B

Diff: 1

Section: 2.2, 2.3

LO: 2.2, 2.3

Global LO: G4

17) The value of Z for the element ^{37}Ar is

- A) 37.
- B) 39.945.
- C) 19.
- D) 21.945.
- E) 18.

Answer: E

Diff: 1

Section: 2.2, 2.3

LO: 2.2, 2.3

Global LO: G4

18) For the isotope ^{71}Ga , Z = _____ and A = _____.

- A) 31; 40
- B) 71; 31
- C) 71; 40
- D) 31; 71
- E) 31; 69.723

Answer: D

Diff: 1

Section: 2.2, 2.3

LO: 2.2, 2.3

Global LO: G4

19) The mass number of Bromine-81 is

- A) 81.
- B) 79.904.
- C) 79.
- D) 46.
- E) 35.

Answer: A

Diff: 1

Section: 2.2, 2.3

LO: 2.2, 2.3

Global LO: G4

20) How many neutrons does an atom of $^{46}_{22}\text{Ti}$ have?

- A) 0
- B) 22
- C) 24
- D) 46
- E) 68

Answer: C

Diff: 2

Section: 2.2, 2.3

LO: 2.2, 2.3

Global LO: G4

21) Atoms of $^{35}_{17}\text{Cl}$ contain _____ protons and _____ electrons.

- A) 17; 17
- B) 17; 18
- C) 18; 17
- D) 35; 18
- E) 35; 17

Answer: A

Diff: 2

Section: 2.2, 2.3

LO: 2.2, 2.3

Global LO: G4

22) An atom with a mass number of 58 and 32 neutrons will have _____ protons.

- A) 16
- B) 26
- C) 32
- D) 58
- E) 90

Answer: B

Diff: 2

Section: 2.2, 2.3

LO: 2.2, 2.3

Global LO: G4

23) The symbol of the element with 23 protons is

- A) Mg.
- B) Na.
- C) V.
- D) B.
- E) none of the above

Answer: C

Diff: 2

Section: 2.2, 2.3

LO: 2.2, 2.3

Global LO: G4

24) An atom with $Z = 31$ and $A = 69$ contains _____ protons and _____ neutrons.

- A) 31; 69
- B) 69; 31
- C) 31; 38
- D) 38; 31
- E) 31; 100

Answer: C

Diff: 2

Section: 2.2, 2.3

LO: 2.2, 2.3

Global LO: G4

25) The value of A for an atom containing 29 protons, 29 electrons, and 34 neutrons is

- A) 5.
- B) 29.
- C) 34.
- D) 58.
- E) 63.

Answer: E

Diff: 2

Section: 2.2, 2.3

LO: 2.2, 2.3

Global LO: G4

26) The value of Z for an atom containing 29 protons, 29 electrons, and 34 neutrons, is

- A) 5.
- B) 29.
- C) 34.
- D) 58.
- E) 63.

Answer: B

Diff: 2

Section: 2.2, 2.3

Global LO: G4

27) The number of neutrons in an atom is equal to

- A) atomic number - mass number.
- B) mass number - atomic number.
- C) the atomic number.
- D) the mass number.

Answer: B

Diff: 2

Section: 2.2, 2.3

LO: 2.2, 2.3

Global LO: G4

28) An atom that contains 47 protons, 47 electrons, and 60 neutrons is an isotope of

- A) Ag.
- B) Al.
- C) Nd.
- D) Bh.
- E) cannot be determined from the information given

Answer: A

Diff: 2

Section: 2.2, 2.3

LO: 2.2, 2.3

Global LO: G4

29) An isotope with 15 protons and 17 neutrons will have which symbol?

- A) $^{32}_{17}\text{Cl}$
- B) $^{17}_{15}\text{Cl}$
- C) $^{32}_{15}\text{P}$
- D) $^{32}_{17}\text{P}$
- E) $^{17}_{15}\text{P}$

Answer: C

Diff: 2

Section: 2.2, 2.3

Global LO: G4

31) Cobalt is element 27. Cobalt-60 is used in the medical treatment of cancer. How many neutrons and protons are contained in the nucleus of this isotope?

- A) 27 neutrons, 33 protons
- B) 33 neutrons, 27 protons
- C) 27 neutrons, 27 protons
- D) 33 neutrons, 33 protons
- E) 60 neutrons, 27 protons

Answer: B

Diff: 2

Section: 2.2, 2.3

LO: 2.2, 2.3

Global LO: G4

32) Hydrogen exists as three isotopes. These isotopes differ by the number of _____ contained in the atom.

- A) neutrons
- B) protons
- C) electrons
- D) charges
- E) particles

Answer: A

Diff: 2

Section: 2.3

LO: 2.3

Global LO: G4

33) Adding one proton to the nucleus of an atom

- A) converts it to an isotope of the same element.
- B) increases its atomic mass by one unit, but does not change its atomic number.
- C) increases its atomic number by one unit but does not change its atomic mass.
- D) does not change either its atomic number or its atomic mass.
- E) converts it to an atom of a different element.

Answer: E

Diff: 1

Section: 2.3

LO: 2.3

Global LO: G4

34) Adding one neutron to the nucleus of an atom

- A) converts it to an isotope of the same element.
- B) increases its atomic mass by two units, but does not change its atomic number.
- C) increases its atomic number by one unit but does not change its atomic mass.
- D) does not change either its atomic number or its atomic mass.
- E) converts it to an atom of a different element.

Answer: A

68) Explain the term "quantized" as it applies to the energy of electrons. (Optional: Be sure to include an example that has not been previously mentioned of something that is quantized.)

Answer: The term "quantized" means that their electrons can only have certain values of energy. This leads to the idea of definite orbitals, instead of allowing the electrons to be at any location within the atom. Examples can be things that are counted, but cannot be split into smaller parts. The price of a candy bar is quantized—it cannot be 39.446 cents—it is either 39 cents or 40 cents.

Global LO: G2

91) Explain how the term "valence electrons" is related to electron configurations. Use the elements in group VI, Periods, 3, 4, and 5, as examples.

Answer: The electron configuration allows us to determine the number of valence electrons by identifying the orbitals in the outermost shell so their electrons can be counted. The orbitals in the outermost shell are all those with the largest coefficient. For example, the electron configuration of S is $1s^2 2s^2 2p^6 3s^2 3p^4$. The outermost orbitals, which have a coefficient of 3, contain six electrons. Therefore sulfur has six valence electrons. For Se, the electron configuration is $[\text{Ar}] 4s^2 3d^{10} 4p^4$, and the orbitals with the largest coefficient (4) contain six electrons. Selenium has six valence electrons. Likewise, for Te, the electron configuration is $[\text{Kr}] 5s^2 4d^{10} 5p^4$, and the orbitals with the largest coefficient (5) contain a total of six electrons, the valence electrons.
